Dr. Pragya Mathur, Psychologist addressing the trainee officers

Inspection of Radiant Panel Flame Spread Tester at Fire Testing Laboratory, NFSC.

The Radiant Panel Flame Spread Apparatus measures the surface flammability by using a gas-fired radiant heat panel. It is intended to measure and describe the properties of materials, products, or assemblies in response to heat and flame under controlled laboratory conditions, and the results of this test may be used as elements of a fire risk assessment that takes into account all of the factors that are pertinent to an assessment of the fire hazard of a particular end use. The inspection of the apparatus, post its installations was done by Director, NFSC.
